ABSTRACT OF THE DISCLOSURE

Various systems and methods for data exchange are provided. As just one example, a method for data exchange that includes identifying at least one target data receptacle and at least two source data receptacles are described. In addition, the exemplary method includes providing a map that includes a relationship between a source element of one of the source data receptacles and a target element of the target data receptacle, and between a source element of another source data receptacle and another target element of the target data receptacle.
